

## Web Code Examples for Forms with SMTP AUTH

ASP.Net 2.0 - [\[More Information\]](#)

web.config modifications:

```
<configuration>
  <!-- Add the email settings to the <system.net> element -->
  <system.net>
    <mailSettings>
      <smtp>
        <network
          host="192.168.85.26"
          port="25"
          userName="www@yourdomain.com"
          password="yourpassword" />
        </smtp>
      </mailSettings>
    </system.net>

    <system.web>
      ...
    </system.web>
  </configuration>
```

Protected Sub SendEmail\_Click(ByVal sender As Object, ByVal e As System.EventArgs)

Handles SendEmail.Click

!!! UPDATE THIS VALUE TO YOUR EMAIL ADDRESS

Const ToAddress As String = "[you@youremail.com](mailto:you@youremail.com)"

'(1) Create the MailMessage instance

Dim mm As New MailMessage(UsersEmail.Text, ToAddress)

'(2) Assign the MailMessage's properties

mm.Subject = Subject.Text

mm.Body = Body.Text

mm.IsBodyHtml = False

'(3) Create the SmtpClient object

Dim smtp As New SmtpClient

'(4) Send the MailMessage (will use the Web.config settings)

smtp.Send(mm)

End Sub

**ASP.Net 1.1 - [\[More Information\]](#)**

```
Dim Msg As New System.Web.Mail.MailMessage
```

```
Msg.Fields("http://schemas.microsoft.com/cdo/configuration/smtpserver") = "192.168.85.26"
```

```
Msg.Fields("http://schemas.microsoft.com/cdo/configuration/smtpserverport") = 25
```

```
Msg.Fields("http://schemas.microsoft.com/cdo/configuration/sendusing") = 2
```

```
Msg.Fields("http://schemas.microsoft.com/cdo/configuration/smtpauthenticate") = 1
```

```
Msg.Fields("http://schemas.microsoft.com/cdo/configuration/sendusername") =
```

```
"www@yourdomain.com"
```

```
Msg.Fields("http://schemas.microsoft.com/cdo/configuration/sendpassword") = "yourpassword"
```

```
Msg.To = "dst@addr.net"
```

```
Msg.From = "src@addr.net"
```

```
Msg.Subject = "Subject"
```

```
Msg.Body = "Message"
```

```
System.Web.Mail.SmtpMail.SmtpServer = "192.168.85.26"
```

```
System.Web.Mail.SmtpMail.Send(Msg)
```

## Classic ASP - [\[More Information\]](#)

```
<%  
Dim ObjSendMail  
Set ObjSendMail = CreateObject("CDO.Message")
```

'This section provides the configuration information for the remote SMTP server.

```
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/sendusing") = 2 'Send the message using the  
network (SMTP over the network).  
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/smtpserver") = "192.168.85.26"  
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/smtpserverport") = 25  
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/smtpusessl") = False 'Use SSL for the  
connection (True or False)  
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/smtpconnectiontimeout") = 60
```

' If your server requires outgoing authentication uncomment the lines below and use a valid email address and password.

```
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/smtpauthenticate") = 1 'basic (clear-text)  
authentication  
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/sendusername") = "www@yourdomain.com"  
ObjSendMail.Configuration.Fields.Item  
("http://schemas.microsoft.com/cdo/configuration/sendpassword") = "yourpassword"
```

```
ObjSendMail.Configuration.Fields.Update
```

'End remote SMTP server configuration section==

```
ObjSendMail.To = "someone@someone.net"  
ObjSendMail.Subject = "this is the subject"  
ObjSendMail.From = "someone@someone.net"
```

' we are sending a text email.. simply switch the comments around to send an html email instead

```
ObjSendMail.HTMLBody = "this is the body"  
ObjSendMail.TextBody = "this is the body"
```

```
ObjSendMail.Send
```

```
Set ObjSendMail = Nothing  
%>
```
